Reformat code command from the edit or assist menu cuts the last lines of the code as shown in the attached picture. It doesn't always do it, when I undo with ctrl+z and apply it again, sometimes I get decent results.

Build:16735

Kind regards.

Hello,

Thanks for raisin this issue! Could you tell us more? I am interested about clang-format version and the operating system you are using. Also, if this is stock example, could you tell us where we can find it? If this is not stock example, please put code here.

In my initial implementation that was basing on replacements. I had this problem, because of uni-code characters, however in current implementation uni-code works as expected. So, I am thinking what it might be? Please check what is the file encoding. clang-format works fine with UTF-8, other encodings might be problematic and might cause issues.

Klugier

os:Windows 10 64bit 22H2 Language:Turkish
upp:16735
CLANG default Upp
File Encoding:Default
Last test:Tutorial Draw01

it is repeated in the examples I created and the ones that come with upp.
Added movie.
Some times good work.
