Hi,

Trying to check if an image has DPI using Image::GetDPI() but it does not return Size(0, 0) if it doesn't have it, while ImageBuffer::GetDPI() does.

```
FileSelNative fs;  
fs.Type("png", "*.png;*.png");  
if(!fs.ExecuteOpen()) return;
```

```
Image image = StreamRaster::LoadFileAny(~fs);  
DUMP(image.GetDPI());
```

Thanks

Hi,

I opened the sample image with irfanview and looked at the image properties.  
The DPI settings seem empty, maybe you want to try with a different image.

Kind regards.

Hi cgokdemir,

Yes, that image has no DPI property, i want to detect that then give it an appropriate DPI.  
Normally Windows will give images with no DPI a DPI of 96, and Photoshop gives them 72 DPI.
