Subject: light for Skylark

One of the reasons I have been using U++ is that I use Skylark on the back-end! Only recently I saw in this link https:// www.ultimatepp.org/forums/index.php?t=msg&th=11956&s tart=0& that the community does not use and from a certain moment it started to weigh on the shoulders of only one! I do not have much knowledge in c++ and only about a year ago, I became interested and slowly learned "on top of U++", which in turn contains many libraries (or something ready-made as exists for example in pascal like Delphi or Lazarus ide's). Today and much more in the future Web development is the meeting of the waters of our ocean. Logic is the premise of programming, so I see no logic in abandoning Skylark! I call the attention of this community, to try to make an effort and not let Skylark (so well developed in 10 years!) die or be abandoned. Please, think about it!

Thanks!
