Hi all,
I spent a few weeks during the christmas holidays building an AI assistant. You know, the GPT craze and all.
Anyway it's been collecting dust ever since, so I'm releasing it as open-source in case someone finds in interesting, useful or just fun for a bit.

Screenshot not 100% uptodate, but should give an idea of the scope.

You can find it here:

Hello lindquist,

Looks cool!
I tried to compile it on Linux, but there is a compilation error: LogWindow package is missing. Where can I find it?

Best regards,
Oblivion

Hi, thanks for checking it out, looks like I had a stray dependency there. It should be removed now :)

Ok, I've removed the package, entered my api key and now it just works just fine! (On Linux). :)

It's a very nice client. Good job!

Best regards,
Oblivion

Thanks a lot :)

And I'm happy to hear it works in Linux as well :d
