Subject: Accelerators stop after popup menu due to focus

I have added accelerators to the main app menu like Ctrl + X to close the program.

If I right click on an element that causes a popup menu to show. In this case the option selected removes an item from a ArrayCtrl.

Once the popup menu goes away the focus seems to be lost, at least that is what I think is causing the next thing.

After the popup menu goes away the Ctrl+X and any other accelerators stop working until I click the windows again.

Fixed the problem for my self added SetFocus() to the code after the execute

```
void ArrayCtrl::RightDown(Point p, dword flags) {
  if((flags & (K_CTRL | K_SHIFT)) == 0) {
    if(cursor >= 0 && !multiselect) {
      ClearSelection();
    }
    DoPoint(p, false);
    ClickColumn(p);
    if(cursor >= 0 && multiselect) {
      if(!IsSelected(cursor)) {
        ClearSelection();
        SelectOne(anchor = cursor);
      }
      Action();
    }
  }
  MenuBar::Execute(WhenBar);
  SetFocus();
}
```
