Hi,

There is a new addition to the UppHub: StackCtrl.

StackCtrl is a simple widget stacking container for U++ that displays only one ctrl at a time.

Features
- Navigation. (prev/next/home/end/goto)
- Search by index and by id.
- Wheel mode. (circular navigation)
- Transition animations (vertical and horizontal).

Package and example code can be downloaded via UppHub. Animation support is experimental (for now).

Screenshot/Gif (reference example)

Enjoy!

Best regards,
Oblivion
