It is for that situation when you are in some longer than page function and do not know what function it is. Now the function header is shown in the first line of editor.

Nice feature, but seem to have a litte flaw (or is this intended?):

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

struct MyApp : TopWindow
{
 MyApp()
 {
  // Long lines of code...
 }

 void SomeFn()
 {
  // Long lines of code...
 }
};

GUI_APP_MAIN
{
 MyApp().Run();
}
```

It only shows struct MyApp : TopWindow { even if the cursor is in SomeFn().

Best regards,
Oblivion

This is intended.

(struct MyApp info is more important; for a picosecond I considered showing ALL function/class headers, but do not want to steal more lines from the editor.)

Cool but I had to disable it under Wayland because for some reason it was slowing down the editor to a crawl... but it is an nvidia card so I wouldn't read too much into that. Seems to work fine on X11 though.

Can you tell exact details about distro? I might try to replicate...

Mirek

Mirek,

Operating System: Arch Linux
KDE Plasma Version: 5.27.8
KDE Frameworks Version: 5.110.0
Qt Version: 5.15.10
Kernel Version: 6.5.3-arch1-1 (64-bit)
Graphics Platform: Wayland
Processors: 8 × Intel® Xeon® CPU E3-1240 V2 @ 3.40GHz
Memory: 15.6 GiB of RAM
Graphics Processor: NVIDIA GeForce GTX 1060 6GB/PCIe/SSE2
Manufacturer: Dell Inc.
Product Name: Precision T1650
System Version: 01

If it works with Wayland for you and you're not using an nvidia card then I'd have no problem chalking it up to nvidia driver issues. Like I said, no problems on X11.
