
Subject: How to make a copy not crypted of a Sqlite db

Hello,

it seems I was able to create and read a crypted db. The trick was just the line

```
sqliteVT.Open( dbname, password, Upp::Sqlite3Session::CIPHER_CHAHA2020_DEFAULT ))  
{...}
```

Now I would like, once it was opened, to create a copy not crypted for a possible future debug.
I read that this can be done with the VACUUM INTO command.

I tried

```
Sql sql(sqliteVT);  
sql.Execute("VACUUM INTO");
```

But nothing happen. What am I missing?
Is there a way to get a copy not crypted?

Thanks,
Luigi
