
Subject: How do I write string_view to Cout() without copying to a String?

Right now I'm using:

```
Cout().Put(str.begin(), str.length());
```

But it would be nice if Stream had an overload to do this automatically so I can write

```
Cout() << str;
```

Without it complaining about the lack of ToString() which demands an unnecessary copy, the same way it works with std::cout.
