
Subject: TheIDE Topic++ 'Export group to HTML' issue with images

Hi,

When using TheIDE Topic++ 'Export group to HTML', all the embedded images get written without base name using just '_0.png' ... '_xx.png'. Therefore, many images get lost and pages with images show wrong images in many cases.

I looked at the code, but could not figure out yet what happens to the 'namebase' and why it does not work.

Best regards,

Tom
