I do not use TheIDE on Linux very often, but when I need to use it I need to try to launch it three to five times to bypass initialization crashes.

Thanks.

Would be nice to track that down, any hints? I do not have such a problem...

Some minimal info would be nice (e.g. what about mentioning the distro used and perhaps something about HW along with bold information about number of crashed :)

Mirek

"Select main package" dialog.
Void Linux. It is a rolling distro.
$ uname -a
Linux w530 6.6.35_1 #1 SMP PREEMPT_DYNAMIC Sat Jun 22 12:41:23 UTC 2024 x86_64
GNU/Linux

CPU: Intel(R) Core(TM) i7-3720QM CPU @ 2.60GHz
RAM: 16GB
Basically, this is a Thinkpad W530.

It didn't crashed with the latest code so far. But check the attached valgrind log.
I compiled Release with Full debug info ...
