Subject: System Key Board Action Capturing
Posted by nikitha_k on Fri, 14 Jun 2024 11:45:21 GMT

Hello,

I was trying to capture the continuous press of SystemHotKey, Similar to the WhenRepeat event of the Button, using Ctrl::RegisterSystemHotKey function I was only able to capture single click event, How to capture continuous press event?

Hello Nikitha_k

If you are in Windows, you can try to call directly RegisterHotKey(). You can see how to call it in the U++ function Ctrl::RegisterSystemHotKey().
The Windows function has a MOD_NOREPEAT option, so it seems that by default this function has to capture continuous key press.
Additional details about using this function can be found here.
