
Subject: Simple single-value dialogs... small correction for more info space

Can someone make all `Edit...(...,label) <=labelSize(bottom)`
as big as a dialog allows it - so that all space can be used(as multiline)?
I do this manually with all new downloaded versions of upp - and it works,
because that 3lines info can come handy.

Also, i noticed that sometimes `EditNumber(double, int` seems ok)
doesn't show any number in `editField(it's empty)`, no matter what value double is set to.
upp-17242

Cheers to the uiLook,
in win11 and dark mode - things don't look as win3.11 anymore

Not sure what you mean. Pull request for layout? Or maybe .lay file attachment here?

Example for `EditNumber`?

Here is for `EditStringLayout(Label)`.
Simply maximize `bottom(Label)` as much as Dialog allows it,
and one gets an extra multiline info space.
Instead of ... `TopPosZ(8, 19)` using around ...`TopPosZ(8, 56)`).

EditStringLayout example attached(modified from upp-17242 but i think latest has the same contents).

Added:

In fact - i modified all three(Edit-Int/String/Double-Layout), resizing right Int/Double dialog by a few pixels and making EditDoubleLayout(lbl,number) same size as in EditIntLayout.

So, if this will be used - mostly just copy/paste Ctrl.lay into source.

I use multi-line info-space(Label) quite a lot and it works ok.
