Hi,

A simple and useful macro, if you ever need to zip and export a U++ package.
This works on Linux but can be easily extended to other platforms.
t relies on a regular command line with a defined HOME variable. (Output path can be easily modified on-the-fly by using an input dialog though...)

```
macro "Export active package as zip file..." {
 ClearConsole();
 name  = ActivePackage();
 cmdline = "cd " + PackageDir(name) + "/.. && zip $HOME/" + name + " --exclude=*.git*
--exclude=*.svn* -r " + name;
 if(!Execute("sh -c \"" + cmdline + "\""))
  Echo("Done!");
}
```

Best regards,
Oblivion
