Hello,

I need to change the color of the text associated to a Button.
I cannot find a simple way to do it.
Is it supposed to use Chameleon for this task?

Thanks,
Luigi

Hello Forlano,
I think there IS a dedicated method for text color (i can't check right now).
But you Can Always use QTF text to display whatever you wan't)
All you have to do IS start you're text with thé QTF escape sequence: "\1". (I'm not dure if it's thé right séquence)

Thank you.
It works. This set a centered red label

```
l = "\1[@6= " << label << "]";
btn.SetLabel(l);
```

Luigi
