Windows 10
MSVC22x64

After working ok for 14 days 17045 now refuses to build anything and outputs the following:

Saving
----- CtrlLib (GUI MT MSC22X64 DEBUG DEBUG_FULL MSC WIN32) (1 / 23)

There were errors. (0:00.51)

Changing to various MS compilers makes no difference. Ditto selecting different "main packages".

Changing to CLANG results in a build of a test app (I cannot use CLANG for serious development it objects to some MS libraries I use).

Is this a MS compiler problem or an IDE problem?

Fixed.

Windows 10 had lost the drive with MS tools.

Sorry to report an error that was MS's fault.
