From [https://www.ultimatepp.org/app\\$ide\\$macros_en-us.html#2.1](https://www.ultimatepp.org/appidemacros_en-us.html#2.1):

>Simple input dialog. Provides as many input text fields as is number of parameters specifying labels for these fields. If user chooses Cancel, returns void, otherwise returns single string if there is just one edit field or array of strings for multiple edit fields.

ex:

```
myText = Input("A","B");
```

only myText[0] will contain a value. myText[1] will be empty.

Fix:

File: Macro.cpp Line 375

Replace

```
out.MapSet(i, (WString)~editors[i]);
```

with:

```
out.ArrayAdd((WString)~editors[i]);
```

EDIT Submitted to github

2nd EDIT Fix merged into master, thanks Mirek!
