Hello,
I need to get CEF working. I took the ChromiumBrowser from archive/bazaar and corrected all issues, so that it can work with the latest CEF standard.
The only thing that fails compilation, is linking. I guess I don't know how to set it properly and instructions from the old package do not suffice. It cannot find the libraries to link to, as the messages are all about undefined Cef functions. If somebody could help, the package could be a candidate to UppHub.

I attach my version of the package. I am working on Arch, so the Cef standard goes in /opt/cef, in my case. The cef executables all work.
