Hi,

I am giving Skylark a try, by lanching AddressBookWeb example.
analysing the urls used are :

```
"submit/create:POST"
```

```
"person/create"
```

```
"submit/edit/*:POST"
```

```
"person/edit/*"
```

```
"person/delete/*"
```

I notice that 'submit' is used in POST instead of 'person'

this is needed in order to easys the use of Skylark with multiple entity

replacing 'submit' by 'person' then running the example ==> ASSERTION PROBLEME

```
ASSERT_(!DispatchMap[q].handler, "duplicate view " + String(path)  
Dispatch.cpp(184)
```

I have invistigated this issue and i have a fix proposal:

File : Skylark/Dispatch.cpp

1 - Add this line at line 174

```
s << "#" << method;
```

2 - modify line 292 :

```
int qq = n.subnode.Get(part[iii] + "#" + AsString((int)method), -1);
```

instead of

```
int qq = n.subnode.Get(part[iii], -1);
```

mirek, please review this change.
