Subject: Color widgets and RichEdit dark mode improvements

There are new modes for ColorPusher, ColorPopup, ColorButton, WheelRampCtrl:

- DarkContent - despite current GUI mode, displays colors using DarkTheme function. Meaning if active, black is white and vice versa
- AllowDarkContent - similar, but instead of hard setting it depends on Dark theme active

Those settings then duplicated in RichEdit, ultimately bringing "dark mode" to RichEdit with somewhat consistent handling of colors. In QTF / RichText colors are still stored as light variant, but are converted during painting.

Ide is now using AllowDarkContent for all RichEdit instances, meaning "dark mode" is supported while editing docs...

Hi,

Thanks for this addition. It improves color selection dramatically when in dark mode.

By the way: Maybe UWord Header-Footer editor could also support dark mode like the main editor now does.

Best regards,

Tom

It's great to have document popup consistent with the rest of the IDE. Thank you, Mirek!
