Subject: Getting Started U++ Framework examples?

Hi - I am still new to the U++ framework (previously using C++ builder and other languages). I am also using the book "Getting Started with the U++ Framework", which seems excellent. However, I am unclear how to integrate the examples with the IDE - how can I get the examples to be added to an nest/assembly and run? I may be missing something obvious, but I cannot see it explained in the book or otherwise.

Dear DMStevenson

Please let us know if you have been able to compile and run any examples, and what your operating system is. This way we can guide you better.

Hi - Thanks for your reply. I was able to get the examples to run. My simple (I'm embarrassed) error was in renaming some of the files, but not changing the *.upp file to the same name. When I did that all was well. Thanks for your attention!!

Perfect. Please remember that the *.upp file name and the folder name has to be the same.
