Hello,

sometimes I receive report that my program (U++ based) has been blocked by some stupid antivirus.
I am the only one with such problem? Even the .exe installer made with NSIS is blocked at download.
Does it depend by the mysql.dll I include in the package? What can I do to prevent such behaviour?
Should I change installer?

Thanks,
Luigi

Hi Luigi

I have had no problems.

Hello, sometimes I have the same issue, but after modifying the code, recompiling it, and rebuilding the installer with NSIS, the problem usually goes away.

Hello,

what kind of modifications have you done in the code? What change have you done in the installer?

Thanks,
Luigi

Just added one to the version number. Maybe this was useful, because this modification changed some checksum or hash.
