Hello,

I update my computer to fedora 42 some time ago and I have Clang 20.  
Since then assist++ crashes every time after a few seconds (I think it depends on which files I am working on).  
So this is quite annoying :(

This is what I get in the log:  
\* /home/xxxx/upp/theide 24.06.2025 22:42:01, user: xxxx

```
22:42:01:795 INFO LoadLibClang0(): libclang path: "/usr/lib64/libclang.so.20.1.6"  
22:42:01:799 INFO GuiMainFn_(): Revision: e1e14c30 Build: 17914 master  
64 bit CLANG C++17 SIMD Compiled: 06/06/2025 18:11:37 /home/xxxx/upp/theide  
***** PANIC: Illegal instruction!
```

I tried with different Assist++ standard : and the one that works best (ar at least that doesn't crash instantly ;) ) is C++23

Here is my Assist configuration:

\*\*\*\*\* PANIC: Illegal instruction!

I tried with different Assist++ standard : and the one that works best (ar at least that doesn't crash instantly ;) ) is C++23

Here is my Assist configuration:

Is it with git master head (nightly) or "release"?

It' with the master :

GIT commit : ff0949a4a5934d5a8bc5a92d275c1e073c3317b9  
Author: Mirek Fidler <[\[email\]mirek.fidler@gmail.com\[/email\]](mailto:mirek.fidler@gmail.com)> 2025-05-27 12:33:04  
Committer: Mirek Fidler <[\[email\]mirek.fidler@gmail.com\[/email\]](mailto:mirek.fidler@gmail.com)> 2025-05-27 12:33:04  
Parent: 522ccf5de056b44cec6840a10e571085ec53ba6a (Painter: Ellipse(Rect) fixed)  
Child: e1e14c308eb217d79c19d4cddcc6aaf8931553a2 (Merge branch 'master' of  
[\[url\]https://github.com/ultimatepp/ultimatepp\[/url\]](https://github.com/ultimatepp/ultimatepp))  
Branches: master, remotes/origin/master  
Follows: 2025.1  
Precedes:

CodeEditor: compiler/linker problem workaround

Since it's one month old, I will update to latest version tonight and see if it's better

RichEdit: Diagram

- there should be "switch off assist after crash" dialog when you start theide next time. Does that work? (just curious here)
  - any chance you can run it, compiled for debug, in gdb and send the backtrace after crash ("bt")
-

Hello Mirek,

Quote:there should be "switch off assist after crash" dialog when you start theide next time  
Yes this works fine

Quote:any chance you can run it, compiled for debug, in gdb and send the backtrace after crash ("bt")

Yes, I also included all the Backtrace detailed info (bt full) in the joined file so everything should be there

Note : the stacktrace was done by loading project 'ide' and launching "full source scan"

Hopefully fixed

<https://github.com/ultimatepp/ultimatepp/commit/859a6e2515d3948950756319c7ecb21b954cc4bf>

please check!

Just checked: seems to work fine :d

"Reindex all source files" completed without errors.

Thank you :)
