Hi U++ites, born from me repeatedly rebuilding "nice header + stacked controls" for every demo. now it's a small, flexible card with wrap/grid and auto-fill. comes with a handy UnicodePicker sample--useful app, good excuse to wire up drag-and-drop and play with styling:

The screenshot shows a web application titled "Unicode Symbol References for U++". At the top right, there are "Copy" and "Exit" buttons. Below the title, a filter instruction reads: "Filter by category, then drag symbols or an entire category into the Selection Bin to generate U++ code".

A grid of category buttons is displayed, including: "Navigation & Arrows 1.0", "Toggle & State", "Status & Alert", "Structural & Layout", "Files & Document", "Time & Date", "Math & Logic", "People & Contact", "Media & Controls", "Tools & Settings", "Communication & Text", "Shapes & Geometry", "Currency & Finance", "Arrows 2.0 (Curved/Move)", "Accessibility & Gestures", "Keyboard & Input", "Weather & Environment", "Rating & Feedback", "Scientific & Technical", and "Punctuation & Typography".

The "Navigation & Arrows 1.0" category is selected and expanded, showing a grid of symbols: "Right Arrow", "Left Arrow", "Up Arrow", "Down Arrow", "Right Triangle", "Down Triangle", "Double Left", and "Double Right".

Below the category grid is a "Selection Bin (Drag & Drop Here)" area, which is currently empty and contains the instruction: "Drag symbols or a whole category here. Click a tile to remove."

On the right side, the "U++ Code Output" panel shows the following code:

```
// Unicode Picker Selections v0.9
// Drag a symbol or a whole category into the Selection Bin...
```
