- generated documentation content for code entities now has less verbose form

- types in generated content are now hyperlinked with code-reference links (means, in "String GetText();" String is now hyperlinked to String description).

- topic browser understands code-reference links

- help and topic browsers are now unified to single window and yes, it does get invoked with F1...

- help&topics are dynamically indexed and provide full-text search (pretty fast one

Ari: please try to check and comment... (you have to sync uvs2).

Do you mean F1 is working? and search ?
and links ?

Well, I guess that some further improvements will be needed (e.g. search is now only "full-text", not inside single topic), but the main parts are now refactored to allow long desired changes...

Could you set the RichEdit to ShowCodes(Null) ?
Those blue dots can get annoying as hell.

well, where? In TheIDE Topic editor or as default setting for the widget?

You can set it off in Topic editor - click on the "settings" icon in right edge of ruler.

You can set it off in Topic editor - click on the "settings" icon in right edge of ruler.

Mirek
Didn't see that little icon there
I meant default to color null for Topic++ (most users will be reading, not writing). But I guess if that setting is there, no huge deal.

But for reading topics, you should rather use browser. Especially now, when it has those nice search features

OK, my fault that it is not as apparent....

...and that stupid bug in TheIDE asking about reloading/keeping the edited file caused by this change is now fixed as well...
