I'm a newbie to U++ and am trying to install it on SLES 10. The initial make fails looking for the file \usr\include\freetype\config\ftheader.h As far as I can tell using YAST, freetype is fully installed, yet the config subdirectory and this file aren't there. Any suggestions?

Is that file anywhere on your computer? Try searching for it. It could just be that your package has placed it somewhere Ultimate++ does not know to look for it.
If you have the file, you might be able to make a symbolic link of the directory.
Please report your findings

Actually, it looks like you will need to install the freetype2-devel package.
That puts it in /usr/include/freetype2/freetype/config/ftheader.h
I'm not sure how U++ "looks" for these files, but that should do it.

Installing freetype2 with the appropriate symbolic link seems to have taken care of the issue. Thanks!!!
