Mirek

Were those articles on the (e.g) codeproject the reason of their decline in downloads?

New articles on Code Project
Submitted by ddiego on Wed, 2006-04-26 18:16.

Jun 2006 859

May 2006 1,304
Apr 2006 1,671 <<==== 04-26
Mar 2006 738
Feb 2006 654

Quote:

U++ vcf

=====

Jul-06 2,562 845

Jun-06 2,941 859 <<==== but 600 were not satisfied and came back to U++:)

May-06 2,381 1,304

Apr-06 2,386 1,671 <<==== vcf article 04-26

Mar-06 4,470 738

but where did the rest of the difference from $4,470 - 2,386 = 2,084$ go in April from U++?

BTW, I assume that U++ have 711 users (downloads between releases)

Some more stats for comparison U++ vs vcf:

Quote:

.....U++.....vcf

=====

downloads_before.....1341.....378

forums_start.....17 November 2005.....1-August 2003

downloads_after.....5220.....614
downloads_peak.....5,220 (forums_start) 8,255 (Jun 2002)
downloads_lastmonth...2,562.....845
forum_members_now.....180.....230
have_articles.....no.....yes

Some conclusions:

vcf (downloads) declined despite forums and articles.

forums made positive impact ~5times for U++, while ~2times for vcf.

vcf articles had "short lived" small impact and didn't help to restore downloads peak.

if you don't have quality of your product and community attractiveness you will lose users to competitors fast and gain from articles will be "short lived" ...

P.S this doesn't mean that I'm against articles. I just say that if a product (including community as a product) is rubbish, users vote with their feet (just leaving). Or you have a lot of "download passengers" but not users. My opinion is quality. It's better to have less downloaders but to make everyone (ok 80%...) a "resident long-time quality user". I suggest to concentrate on creating "attractive quality community services" to be beneficial (or profitable) for its "quality residents"...

I think there are many factors involved and I hope you trust me I am concentrating all of my efforts to have the quality....

Anyway, please note that one of valid points in the first of forum posts the guy mentioned that he goes for "toolkit actively developed". While I think this forum is quite active, it is unfortunately a little bit "hidden" (and I am now not speaking about "great www unification", just about the fact that people come here when they already know about U++).

What would be nice, and rbmatt already mentioned it, we need some sort of "news" propagated where fits (read: "where accepted"). It always makes me jealous if I see the least important advancements of Haiku or SkyOS or Syllable, interesting but irrelevant hobbyist OSes, widely trumpeted all over the web.

We can win the quality (we will!), but it will completely useless victory as long as 99% of C++ community is completely unaware about U++ (YOU have found us one year ago - by that time, U++ was around for 2 years. And you are interested in trying new things....).

Mirek
