I tried to use WhenAcceptRow to validate user input, but when returning false, the changes of fields other than last modified fields disappeared from array and database.
I have changed Accept() method to:

```
bool SqlArray::Accept() {  
    bool b = ArrayCtrl::Accept();  
    if(b) Ctrl::ClearModify();  
    return b;  
}
```

And now it seems to be working well.

Thanks (now in uppsrc).

Mirek
