Anybody to write and submit similar article about U++?

<http://www.codeproject.com/library/wxwidgets.asp?df=100&forumid=212952&exp=0&select=1318346#xx1318346xx>

Once again, Overview is a good source material (maybe could be used even without further modifications).

Mirek

P.S.: If nobody volunteers, I will do it myself. However, that will mean slowing U++ development by 2 hours:)

I'll do it. I'll post it online before I actually submit it (for comments and suggestions).

Draft one:

<http://ezellmedia.com/upp/IntroU++/IntroU++.html>

Thoughts, corrections, suggestions?

I didn't want to enumerate a huge feature list like the other one, because frankly, I don't think most people care. The just want to know does it work, and how easy is it. If we can "hook" them, they will come to the site for specific details. But this is up for debate too.

I'll submit it maybe tomorrow, depending on what feedback I get from you all.

First impression: those cuts of the screenshots...
Anyway, the last word is Mirek's...

Well, thats a small thing... Code Project has a rule that screenshots can't be more then 600px wide. I personally hate when screenshots are just chopped off with no visual indication that more could be shown- but isn't. For the shots that show everything, I did not cut them.
But I'll be glad to retake the shots if thats the consensus.

We can do <http://ezellmedia.com/upp/bIntroU++/IntroU++.html> if you like that better.
How about comments on the actual article?

Good work.

I like "fade-out" screenshots a lot. Please use them instead of those jagged.

Notes:

- remove "NTL" notes. It is not very important at that point and it even is not true (Core was always Core, just in short period, before releasing U++ as public project, as first try, I extracted

container classes from the Core, named them "NTL" and released).

- maybe you should note that the very first compile can take a bit long and why (because U++ has libraries in source form and they have to be compiled first time, but are cached afterwards).

- typo: "Arrage the widgets so it looks like" - Arrange?

- maybe a screenshot of final application?

Mirek

That looks great. It might be nice to include the final source code, just in case newcomers got lost along the way (since the instructions for adding more code are textual).

You highlighted the ease of manipulating controls well - shownig that AddItem() could be done in two lines.

I actually pulled that section from Wikipedia... does that mean that article is wrong?

Section expanded

luzr wrote on Sun, 13 August 2006 04:26- typo: "Arrage the widgets so it looks like" - Arrange?
Fixed. Thanks.

luzr wrote on Sun, 13 August 2006 04:26- maybe a screenshot of final application?

Good idea, not sure why I didn't do that.

The source is available as a zip at the top, but I agree, I do need to show the final code.

Yes. Going to fix that.

Mirek

Well, it's done.

<http://www.codeproject.com/useritems/IntroUpp.asp>

I can still edit it if you notice something.

I would like to put a link to your article on my website.

Which link would you prefer?

<http://ezellmedia.com/upp/bIntroU++/IntroU++.html>

or

<http://www.codeproject.com/useritems/IntroUpp.asp>

Link to codeproject. It it a little more updated and counts visits.

Thanks!

Thanks!

Done! (I added a link to Leonardo Cecchi's upp recipes (<http://leonardoce.interfree.it/leowiki.html>), too.

Werner

P. S.:

You might want to check your location data. After all we want to know exactly where the famous whiskey comes from!

W.
