No support in U++. However, host platforms can.

In Win32, it is easy. In linux, you can use

system("playsnd " + path);

- this is what I plan to use for playing "prompt beeps".

I've used SDL_mixer in the end... do you think it can be useful in future?

Sound support? Most likely.

Why not? Use whatever to develop your app.

Well, maybe some day in the future there will be some smart and nice sound support in U++ (e.g. interesting would be do it Image-like way), but right at the moment, these plans seem to be distant.
