In one of my apps I wanted to have links list. See screenshot for what I mean. Beacause there was not such a control in upp I developed it myself. It has usc file so it can easily be used in layout editor (see main.cpp). You don't have to care about "making inactive" previous clicked link - it is done automaticaly.
To have it in your app just add linkctrl package to your project and put #include <LinkCtrl/LinkCtrl.h> in proper file.
