Added:

- Many Topic++ improvements. More info here
http://www.arilect.com/upp/forum/index.php?t=msg&th=1267 &start=0&
- Zlib compression is now part of Core
- New ASSERT in Win32 CtrlCore code to avoid nested repainting and to avoid clipping in wrong rectangle.
- Report& Margins(int top, int left)
- RichText: QTF minimal cell height
- More tutorials and EditField documentation
- Topic++ compression

Modified:

- Layout desinger now uses font-zoom for actual font
- LineEdit horizontal scrollbar is now set adjusted (and hidded/shown) based on current visible text rather than actual line.

Fixed:

- Linux crashing (bug in SyncScroll optimization)
- Ugly GUI font in Ubuntu

PS: On two machines I tested upp there was problem with running theide. Widnow didn't show up, but process was visible as active. If you have the same problem just delete your old theide.cfg and try again. In my both cases it helped.

Is the subversion repository still being updated?

Last update was July 23rd (Rev 29)
https://svn.sourceforge.net/svnroot/upp

- Augusto
