Which OS?

What problem looks like? Missing characters (boxes) or something worse?

Mirek

Thanks.

I believe this is the font problem. We are using Arial for that filelist.

This is a little bit difficult to solve, so please help. In order to have some minimal font support in apps, U++ defines 3 "fundamental" scalable fonts: sans-serif ("Arial"), serif ("Roman") and monospace ("Courier").

These fonts in Windows envinronment are mapped to Arial, Times New Roman and Courier.

BTW, similar scheme is used in HTML protocol.

Now it seems like we should use different fonts for chinesse environment, as Arial obviously lacks chinesse glyphs.

So comes the question: How these settings look like in your web browser? E.g. in firefox, in Tools/Options/Content/Advanced?

just another try failed:in following block,I can't input Chinese to replace "hello".

```
test::test()
{
    CtrlLayout(*this, "hello");
}
```

```
GUI_APP_MAIN
```

```
{
    test().Run();
}
```

hongdong wrote on Mon, 21 August 2006 05:23just another try failed:in following block,I can't input Chinese to replace "hello".

```
test::test()
{
```

```
CtrlLayout(*this, "hello");  
}
```

```
GUI_APP_MAIN  
{  
    test().Run();  
}
```

Well, this one is most likely caused by file encoding setting. Go to File properties and check. Then adjust the font in Environment settings to make it work...

Great, that supports the theory (you see these 3 fonts we are using too, and you have some chinese name there).

Have you had to enter these fonts there, or did firefox the necessary detection for you?

Where that font comes from?

I have change the settings,FF'S(english ver)default settings also works for me.the fonts come with

Windows,just need to set the default local as Chinese.that's enough

Actually, what we need to resolve now is to how to replace that Arial/Roman/Courier with the chinesse font, perhaps when local is chinesse.

Any idea?
