hello, sorry, if I am posting wrong here...

I have a upp application. window is created using 3d party manager. I am interested in catching keyboard/mouse by upp functions(getcapslock, scanninh keyboard etc) and to define callbacks for keypress, releases etc. is it possible some common way ? (I know uncommon ways well)

What is 3rd party manager?

Anyway, callbacks are independent of GUI. Perhaps the way to go is to create your own encapsulation / interface. Alternatively, use Ctrl interfaces without U++ GUI.

this I tried to avoid... nevermind; good point with interfaces...

thank you

hmm, in ONE project... I am using just the Core package of upp. this manage everything I want here. as a windows, there is Ogre 3D engine, which create windows etc. it has some 'getkey' funcs in house, but it is marked as 'deprecated' in a future. so, some func type 'getStateOfKet(key)' would come handy. state here is thought as PRESSESED, RELEASED, OFF, ON(not just pressed last 'tick') or whatewer to monitor keys without need control. but I don't know anathomy of upp in detail yet.
