Hey,

I just downloaded upp 608 dev 1 src from SF onto my new machine, and wanted to check out this Chameleon stuff. But, I can't find any makefiles for mingw or VS to make the ide. How do I build the ide? Please don't say I have to download 605 release to get an ide, or get a download that has mingw in it (I already have mingw installed).
Thanks

Sorry, at the moment we are not maintaining makefiles for dev version.

Generally, src downloaders should use the previous ide version to compile TheIDE.

If you do not have TheIDE capable of doing so, download mingw version (it is only 5 MB more, 1 minute on my connection), install and if you insist on single mingw on your machine, just delete then mingw folder....

Mirek

You are fast at responding. I will download it, and delete the MinGW. I don't mind more than 1 mingw, as long as they are different versions and placed in a good spot.
Cheers
