Great. Would you like to upload it to sf.net?

Mirek

Mirek

How to upload to sf?

I must give you rights...

PM me your sf.net username first, please.

However, think carefully, this means you are taking over Linux releases!

Anyhow before uploading to sf.net, have u tried to install it yourself? Is it working ? I mean both src.tar.bz2 and .deb version.

I want to know whether it is working or not.

By the way, my username in sf.net is "freetogo"

Actually, I do not even know how But I am also not relevant.

I hope that real experienced linux users will test and report problems. This is dev version, designed to reveal them.

Sorry for taking so long, I was out for weekend and then sf.net simply was refusing to work.

You should now be able to do file-releases on upp.sf.net.

I converted the deb package to rpm using alien (contained in SUSE distribution) and it installed and worked without any problems. The commands are:

```
alien --to-rpm --keep-version upp_608-dev-1_i386.deb
```

followed by:

```
rpm -ivh upp. . . . .rpm
```

take care to list the directory before the rpm command because alien makes small changes to the package name which are easily overlooked.

Hope this helps someone.

Regards
Richard
