Subject: Easy diff creation for UVS2 working copy?

I am not sure where to ask this, so I put it here .
Is there a way to easily generate diffs from changes made in uvs2 working copy against a uvs2 repository version?
You can do it easily with subversion using 'svn di path/to/working/copy', but I don't know how to do this in uvs2.

Matthias

In UVS you can open the compare window to see changes between two versions hi-lighted in blue. As for an actual diff file, doesn't look like the feature exists yet. Shouldn't be too hard though.

Yes, I discovered that, but it would be nice to have such feature to provide the patches.
