Subject: new behaviour of Splitter 608-dev2

Hello,

with this code (always the same)

```
VegaMain::VegaMain()
{
 CtrlLayout(*this, VERSION);
 spls.Vert();
 spls.SetPos(8500);
 spls.Vert(tabs, consoleFrame); // <<<<<<!!!!!
 SetBars();
 SetTabs();
 Init();
 BackPaint();
 this->WhenClose = THISBACK(Exit); // prevent the closure
}
```

I get the following picture

The splitter split the area in two equal regions. With 608-dev1 and before instead the bottom part (consoleFrame) was only 15% of the total area and this was what I wanted. I'm trying to play with logical coordinate to reduce the consoleFrame area but without success. Any suggestion?

Luigi

Quick fix: Put SetPos after Vert(...).

Anyway, should work even as it is. Investigating...

Mirek

It works!
Thank you,

Luigi
