+ void Splitter::Add(Ctrl& pane); Splitter& operator<<(Ctrl& pane) { Add(pane); return *this; }
+ CJK (chinesse / japanesse / korean) improvements. More here:
http://www.arilect.com/upp/forum/index.php?t=msg&th=1401 &start=0&
+ TheIDE now has switching of GUI styles (in Environtment../IDE)
+ New RichText properties (Tables now support: keep cell in single page (QTF- "k"), keep the
table in single page ("K")
+ New reference/Chameleon example
+ Added specific support for printing large Images
+ Image tutorial

* Paint system once again refactored..

- LineEdit (and therefore Ide editor) "vertical bar osciallation" problem
- X11 Clipboard fixed

+ New/Added
* Change
- Fix

Running UWord, compiled with "MSC8 Optimal" under Windows XP, causes the view and the
status bar to flicker heavily when a character is entered or when a toolbar icon is touched,
respectively.

Commenting out "Ctrl::ShowRepaint(50);" in GUI_APP_MAIN removes the problem.

Also it might be a good idea to correct the syntax of ShowRepaint in ScrollView (although it's
commented out).

I download this version and i'm tried for compile it, but I don't know what is the best method for do
it.

I use theIde605 for build, but the compile GUI-Speed,NOLIB-Speed crash at linking time whidth the next message:

Linking...

char c
onst* const*, Vector<void*>&)':Dli.cpp:(.text._Z8CheckDllPKcPKS0_R6VectorIPvE+0x1e):
warning: Usin
g 'dlopen' in statically linked applications requires at runtime the shared libraries from the g
libc version used for linking

s from the glibc version used for linking

: Using 'getpwuid_r' in statically linked applications requires at runtime the shared librarie
s from the glibc version used for linking

tOpen': warning: Using 'getaddrinfo' in statically linked applications requires at runtime the sha
red libraries from the glibc version used for linking

`Socket::Data::OpenClient(c
har const*, int, bool, unsigned int*, int, bool)':socket.cpp:(.text._ZN6Socket4Data10OpenClientE
PKcibPjib+0x2eb): aviso: Using 'gethostbyname' in statically linked applications requires at run
time the shared libraries from the glibc version used for linking

tINETConnect': warning: Using 'getservbyname' in statically linked applications requires at runtim
e the shared libraries from the glibc version used for linking
/[B]usr/lib/gcc/i486-linux-gnu/4.0.3/../../../../lib/libX11.a(ConnDis.o): In function `_X11TransConnect
Display': reference a `XauDisposeAuth' not defined

Display': referencia a `XauGetBestAuthByAddr' sin definir

[/B]
There were errors. (23:23.92)

Maybe is GUI MT-Speed, or GUI USEMALLOC or GUI ULD?
I have not found in the forum any reference to the exact method to make the compilation.

You need to have output mode "Shared" option active (to make TheIDE build process to use shared libraries).

In console you should see something like "GCC GUI SHARED LINUX"

Finally I have been able to compile TheIde as you have explained to me, thanks.

But we have other bug similar to
 http://www.arilect.com/upp/forum/index.php?t=msg&th=1397 &start=0&

CtrlLib/appdoc.tpp/DlgCalc$cs-cz.tpp is in a wrong format, I think.

Nico

Really strange as I am still unable to reproduce it, while using ubuntu 606.

Do you think you could help us to track that down using RLOGs? (See that other thread).

Mirek

I'm sorry. the wrong file is TCtrlLib/appdoc.tpp/DlgCalc$cs-cz.tpp
If you see it, you view that format is very diferent that other files in directory.

When there am debug the IDE I have seen that it was a exception of the loop in function SyncTopicFile (line 122 of ide/browser/topicbase.cpp) and that the explosion takes place when it tries to parsear the cases out like a QTF

line 153 and 154 of TopicBase.cpp
 Topic tp = ReadTopic(LoadFile(path));
 SyncTopicFile(ParseQTF(tp.text), link, path, tp.title);

Different format is OK. It is older uncompressed format, TheIDE should be able to cope with it.

Anyway, thanks for hints, I will check that.

I was pleased to see this, even if a little sceptical, but I must admit, it just plain worked. Very nice!
