I modified CppSQLite3 as Upp friendly without fully test.attatch is that.
Main changes:
1,replaced char* with String;
2,delete DONT_DELETE_MSG
3,delete CppSQLite3Binary class and sqlite3_encode/decode_binary
CppSQLite3 was written by Rob Groves,http://www.codeproject.com/database/CppSQLite.asp.

Uh... What is the advantage over our current fully integrated plugin/Sqlite3 ? (See reference/SQL_Sqlite3)

Mirek

Mirek
That doesn't mean advantage,just because I am familiar with CppSQLite, and I used it before,in my opinion,CppSQLite has simple interface,support precompiled SQL operation,support "getTable",that is very important for query and update side by side.As I know,many SQLite C++ wrapper variated from CppSQLite,ex. wxSQLite.I guess,the plugin need some more up layer wrapper for making it more general ,right?

thank you for your reply,and I will look more into the plugin,using the plugin has a quite good advantage :easily port to other database ,I was battling with this point.

Hi Ulti,

May I ask you some minimalist application that show how to use your package? Perhaps you have ported the same test program appearing in the page
http://www.codeproject.com/database/CppSQLite.asp
Thank you,
Luigi
