Is possible to set a Button color Background and/or Foreground?

Thanks a lot

Yes, via SetStyle and chameleon (requires dev version).

Hi. I'm very sorry to bump such an old topic. This is exactly the question I was going to ask, but I do not understand the reply that was given. I can't find any reference to such features in the manual. Please could you (someone) go into a bit more detail?

Well there are basically two ways to do it. If you want to apply a custom style to a specific button, you can use a function like this one:

```
void SetCustomStyle(Button &btn)
{
   static Button::Style style = btn.StyleNormal();
   //do stuff with it
   btn.SetStyle(style);
}
```

Or if you wish to change the global "skin" of all buttons, look over the Chameleon package in the reference nest.
