Hellooooouuuu!

I am going to need at some moment a functionality like the one UWord, and I am whereupon the one that is in the version 609-dev3 blinks much and is very uncomfortable.

I have watched the code and is something rare that it would have to take off not to confuse people.

```
GUI_APP_MAIN
{
  //Ctrl::ShowRepaint(50); <-- COMMENT THIS LINE
  SetLanguage(LNG_ENGLISH);
  UWordFs().Type("QTF files", "*.qtf")
    .AllFilesType()
    .DefaultExt("qtf");
.....
```

Nico

Ahh, thanks.

I should finally learn to put examples back to original state when using the to debug U++
