If anyone knows what "callback -> thisback" is all about. Please write a few lines to educate me so that I could finish the rest of the codes.

I will be on vacation in the coming week and will definitely be delighted if any genius could give me a happy surprise when I come back by
either
1) send me information that could make a programming dummy like me manage to know how to write the rest of the codes
or
2) finish the rest of the codes for me.

testing procedures:

tar -jxvf trayicon20060930.tar.bz2
cd trayicon
./traytest

p.s. You might need to modify the Makefile if your upp directory is not
under ~/upp
