Hi

The attached zip file ide-packages-doc.zip (765 KB) contains some documentation (pdf and Topic++ files) on packages and assemblies.
Owing to the limitation of 2MB on zip file attachments, one of the pdfs is in the next message coz it's around 2MB by itself

Post any questions or suggestions here. Thanks.

There's a zip file within the zip file containing Topic++ files and a readme.txt file which says the following.

The zip file ide-app-tpp-topic-files.zip contains Topic++ files that were used to generate the pdf files. The .tpp files need to be placed in \uppsrc\ide\app.tpp and the file gp1style1.style goes in upp Common directory.

IntroductionToUPP\$en-us.tpp is an outline of what I think a U++ user guide intro. page should say but it's only half done right now.

Also needed is a topic on how to use TheIDE and info on "output mode" dialog and "build methods" dialogs (and some other stuff!).

Graeme

OK, it is part of TheIDE help now (Except of intruction part, which seems to be way unfinished).

I have just centered images and removed "can be compiled to static library or set of object files", as that is not 100% correct.

Thanks!

Ok, thanks. Could you post the updated tpp files (zipped?) back here so I can update a few things and people can download them or make comments. I'm thinking when I grab the files off this forum I might post a "lock" message to say I'm updating the files so no-one else tries to. Then when I post them back I'll unlock. I don't think we need a mutex for this What do you think?

Graeme

Here... BTW, I thing that posting .tpp file itself is enoough (stylesheet is contained and can be exported any time anyway).

ok, well I don't know much about stylesheets coz they're not documented.

BTW that reminds me, I couldn't get the stylesheet to apply itself to the Heading1 at the top that has Times new roman font - I had to apply 20 point font "manually". I was going to change the name of that stylesheet too ...

I'll assume you didn't change the other one about ConfiguringPackages - not even to centre images ...
