Hello, On having executed the command make in the directory upp-linux-386-605 me the following mistake appears:

make: *** No rule to make target `/src/uppsrc/ide/SelectPkg.cpp', needed by `/home/cxl/upp/out/ide/GCC32-Gcc-Gui-Linux-Main-Shared/Selec tPkg.o'. Stop.

I am not experienced installing for console, this way that any suggestion will be of great help.

thanks

Please, use 32-bit TheIDE binary version to compile 64-bit one.

Mirek

I'm having the same problem although I am trying to compile using make. There are no clear instructions on how to compile this thing and, at least for me, the binary does not work at all.

mkdir -p /home/cxl/upp/out/ide/GCC32-Gcc-Gui-Linux-Main-Shared/
mkdir -p /home/cxl/upp/out/ide/GCC32-Gcc-Gui-Linux-Main-Shared/
mkdir -p /home/cxl/upp/out/ide/Common/GCC32-Gcc-Gui-Linux-Shared/
mkdir -p /home/cxl/upp/out/ide/LayDes/GCC32-Gcc-Gui-Linux-Shared/
mkdir -p /home/cxl/upp/out/ide/IconDes/GCC32-Gcc-Gui-Linux-Shared/
mkdir -p /home/cxl/upp/out/ide/Builders/GCC32-Gcc-Gui-Linux-Shared/

`/home/cxl/upp/out/ide/GCC32-Gcc-Gui-Linux-Main-Shared/SelectPkg.o'.  Stop.
liquibyte@Liquibyte:~/upp-src-605/uppsrc/ide$
```

I have tried several of the solutions offered here to no avail. As a matter of fact, the one that confused me the most talked about ./configure which is weird considering there isn't.

Another possibility is to export makefile from 32-bit version (32-bit ubuntu).

We have to apologize for not updating makefiles for dev versions. We still miss active linux maintainer that would do that

They (makefiles) shall be ready for the final version.

the situation is very unfavorable. The truth is that it worries me because I have not advanced in the development under linux

By the way, someone knows because this happens:

root@andromeda:/home/heissen/Desktop/upp-linux386-605# ./theide
bash: ./theide: Permission denied

Forgive my ignorance but my labor of work in linux scarcely begins

I think this is missing "execute" attribute.
