With *.upp files - none.

*.usc files contain various scripts and are using Esc. However, Esc defines just "method" bodies, there is more information in .usc files than just scripts. Esc is really "embedded" language, even if you consider syntax

What kind of information? Is that documented anywhere?

No, it is not documented yet.

Anyway, I guess you can look yourself for what is inside .usc files

Basically .usc

- describes properties and (default) visual appearance for widgets, this is needed for Layout designer to work

- can contain TheIDE editor macros

- can contain functions to be used in TheIDE calculator

In other words, .usc is file that contains the "metacode".
