[View Forum Message](#) <> [Reply to Message](#)

It is the first usable version that ever released. It should be worked either in Gnome or in KDE.

Thank Luzr for your support.

Testing procedure:

```
tar -jxvf trayicon20061010.tar.bz2
```

```
cd trayicon
```

```
./traytest
```

```
make
```

```
./traytest
```

In file mbpixmap.h line 23

```
#include "libmb/mbconfig.h"
```

This file does not exist in my system, but if I comment this line, mbpixmap.c file compiles fine.

This is the result when I tried to compile.

(I'm sorry my compiler shows msg in Spanish!!)

```
mbtray.c
```

```

Sorry, I have forgotten to tell u that CtrlCore.h need to be patched. Some program's access level need to be changed from "private" to "protected".

I have modified the traytest program to do the patch job.

Quote:tar jxvf trayicon20061010.tar.bz2

cd trayicon

./traytest

make

./traytest

Thank u for sending me the error codes. Though I can't read Spanish, it is still very helpful to me.

[View Forum Message](#) <> [Reply to Message](#)

It works!

I have modified CtrlCore/CtrlCore.h file (lines 262 and 531 to convert private to protected) and program work in my ubuntu with gnome.

The popup menu look a bit rare ...

Nico

Thank u very much. I am very delighted to know that it works.

I know the popup menu look a bit obscure. Any suggestion to make it look better?

By the way, why don't u use my traytest to patch CtrlCore.h ?

CtrlCore.h ?

I am new using linux and still I do not feel very surely using make, etc.

Nevertheless one occurs me very well to dive in the code, already you have seen it.

Maybe it is why u could dig out so many problems from my codes.

Anyhow, you have helped me a lot

Though u are new to linux, you seems to manage to debug codes quite well. What debugger are you using or more precisely how u debug codes?

Thanks.

This is a question difficult to respond... I pray every day

I have been having much experience working with code C/C++ for more than 10 years. I have fought type of things yet, until now in windoz. Now is my Linux time.

My system is an ubuntu 606 with the normal configuration. I debug with a lot of breakpointa. I don't know how live without a search in files function.

oooooh!

and I use a translation page to make almost all the translations.

What I say about prayer was a joke , I practice the meditation every day. And this is good to have the wide-awake mind.

What is meditation? Does it do anything apart from give you a wide awake mind?

That is a difficult question. It helps me to concentrate to me. But I believe that this it is not the best forum to speak about this.

True, though you don't need to worry coz the forum moderator's gone AWOL (he's probably in a monastery meditating). Thanks though.
