Hello,

There is already a wonderfull dialog that permit me to move in the file system and select a dir, but I would like to merge it in a greater dialog or window. I've not seen this widget. I wonder if it exists or I've to built it modifiyng the FileSel dialog. But I'm sure there is a smart way to include it in another window... that of course I do not know...

Luigi

Unfortunately, there is none direct simple method.

But maybe using FileList directly would prove simple enough. In fact, I think we should move some of FileSel functions to FileList, then it would be quite simple. But even without that, it is still not that complicated; see e.g. XmlView or ImageView examples for hints.
