Hi,

I have a DocEdit and a LineEdit in a lay file. The font is StdFont(11) for both.

When I load a text file into both controls, the font type displayed in DocEdit is different from that in LineEdit.

Is this the intended design or am I missing something here?

Thanks in advance for any ideas or suggestions.

Best Regards,
Yeoh

Well, you should not have StdFont in LineEdit: LineEdit needs monospaced font.

I am not quite sure what exactly you see, but I think it is proportional font painted as monospaced.

Mirek
