how do i update a toolbar icon?

i have set the toolbar with code similar to this:

```
[...]
```

```
tb.Set(THISBACK(MySetToolbar);
```

```
[...]
```

```
void MyClass::MySetToolbar(Bar& tb) {
```

```
    tb.Add(count > 10,"some text",Img::SomeImage(),THISBACK(SomeFunction));
```

```
};
```

how can i redraw the toolbar, that the boolean function "count>10" is rechecked and the Button is enabled again?

tried Refresh(), SyncBar(), RefreshLayout(), RefreshParentLayout(), but nothing worked

Using Toolbar::Set.

Usually, I add method SetBar to my application that calls Set with proper callback and then call SetBar each time Toolbar needs refreshing.

There is quite smart update logic in SetBar so that things get repainted only if needed even if "SetBar" looks like rebuilding the toolbar from the scratch (in other words, calling SetBar is relatively cheap).

Thanks, Mirek

you answered already the question i was going to ask

can you read my mind?
